

Object Oriented Programming Course Project – Evaluation Rubric (Total: 30 Marks)

Criteria	Description	Marks
1. Problem Understanding & Requirements	Clarity in identifying the problem, defining objectives, and gathering requirements. Problem statement well-defined.	3
2. OOP Concepts Implementation	Appropriate use of classes, objects, constructors, destructors, inheritance, polymorphism, encapsulation, abstraction, and access specifiers where applicable.	6
3. Code Quality & Structure	Proper code organization, modularity, meaningful naming conventions, and adherence to coding standards. Includes comments and indentation.	4
4. Functionality & Correctness	Program runs without errors, meets all stated requirements, and produces correct output. Handles edge cases if applicable.	5
5. Use of Advanced Features	Use of file handling, operator overloading, exception handling, templates, STL, or dynamic memory allocation (if relevant to project).	4
6. User Interface & Interaction	Clear and user-friendly input/output, meaningful prompts, and output formatting.	3
7. Documentation	Includes project report with introduction, requirements, design (flowchart/class diagram), code listing, sample outputs, conclusion, and references .	3
8. Originality & Creativity	Uniqueness of idea, innovative features, and independent problem-solving effort.	2
